Day 1

Day 2

WELCOME

Dear Attendees,

Welcome to the 4th edition of MiningTech North America Conference & Expo. We are honoured that you can join us here in Vancouver, British Columbia (BC) for this event.

With demand for critical minerals surging worldwide, mining companies across the globe, including here in Canada, are under increasing pressure to reduce environmental risks and improve sustainability. Technology such as cleantech can help mining companies meet these environmental goals while scaling responsibly. This enables mining companies to gain trust and retain the support of local communities, governments and stakeholders in their project development.

This year's event will bring together industry leaders, innovators, and experts to explore the latest advancements shaping the future of mining and resource development. Discussions will focus on cutting-edge innovations and developments in IoT, automation, and digital transformation, highlighting their applications across the entire mining value chain — from exploration and mineral processing to underground and surface mining, waste and tailings management. The conference program will also delve into the integration of supply chain optimization, logistics, and talent management, emphasizing how technology is driving efficiency and sustainability in mining operations.

For an immersive hands-on experience, our exhibitors will also demonstrate how technology can improve mine site safety, enhance two-way information communication and exchange with frontline mine workers across multiple languages, improve mine rail transportation and material handling as well as protect mine equipment from corrosion and weather damage during storage and transport.

Besides MiningTech North America, we also organise the global Energy Transition, Critical Minerals and Mining Investment Conference Series. To date, this Conference Series have been held in Singapore, Japan, India, Australia, UK, United Arab Emirates, Canada and USA. Globally, our events cover Africa, Australia, Asia, Latin and North America and Europe. To find out more, you can speak to us or browse at our website www.spire-events.com.

In closing, we hope you will make many meaningful connections over the formal and informal conference and networking sessions over the next few days. Have a great MiningTech North America Conference and Exhibition experience ahead.

Yours sincerely,
Daniel Radziszewski

SILVER SPONSORS

Mitti is the operations system for every site, shift and standard.Trusted by over 80,000 organisations, Mitti brings your people, operational data and workflows into one operating picture. From the frontline to the boardroom, it gives everyone a clear understanding of what's happening, highlights what needs attention and recommends what to do next. Every inspection completed, issue raised and action taken becomes intelligence your teams can use to improve every day.

Website: **www.mitti.com**
Email: support@mitti.com

Tandm is a voice-first intelligence platform for frontline teams in mining and heavy industry. It ties your existing systems together, keeping information flowing to where it's needed. Workers speak naturally, in any language, hands-free, online or offline, to flag a hazard or close out a repair. They can ask what's worked before and get an answer drawn from the site's own history, not a manual. Tandm connects what your other systems keep apart: a ground-control near-miss, a deferred conveyor repair, and a haul-road hazard in the same area become one picture, flagged to the right people before they add up to an incident.

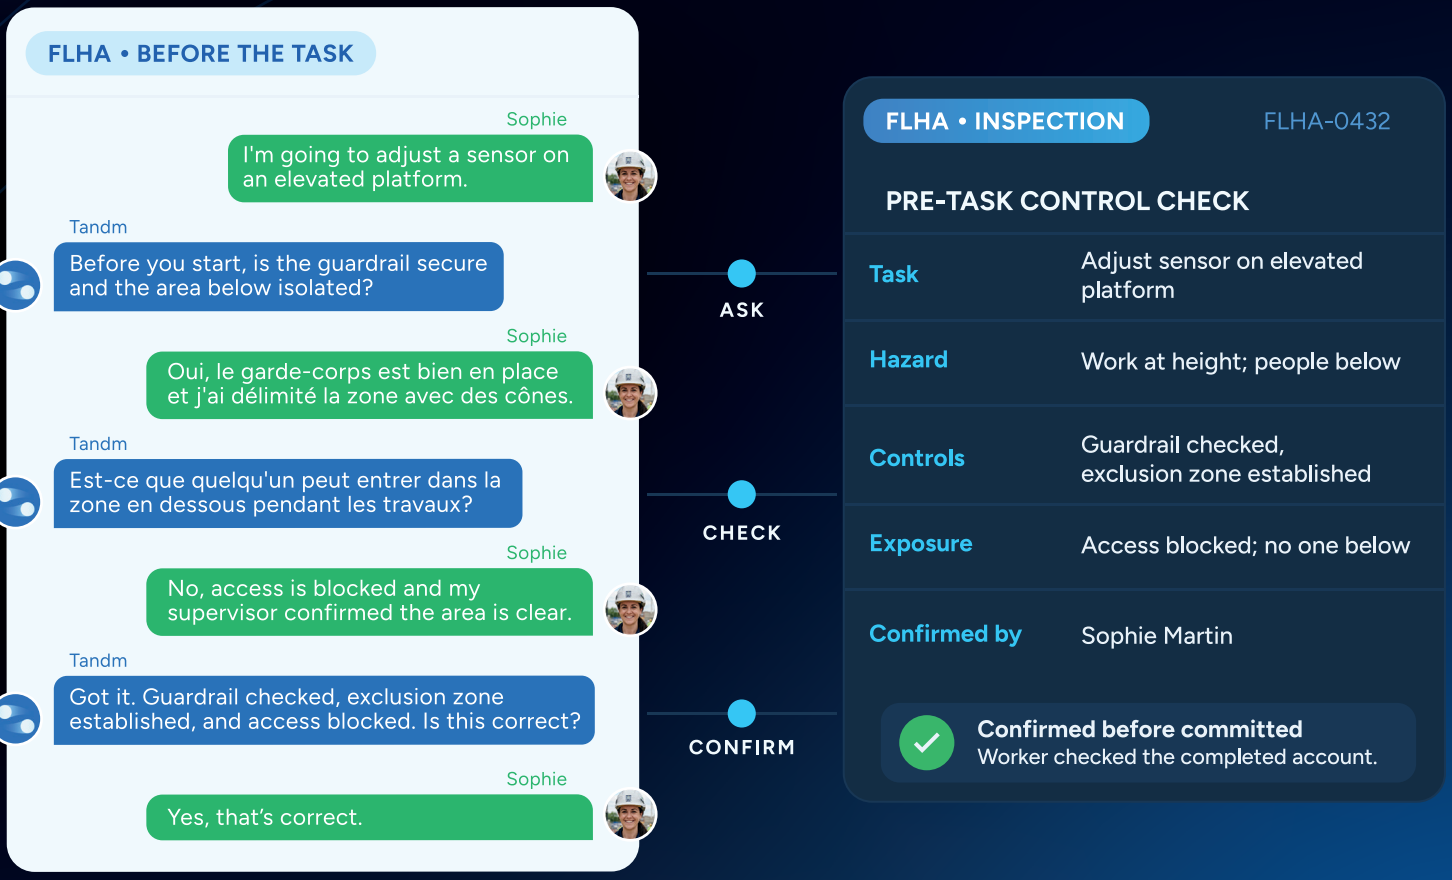
Email: ben@promosapien.ca

Critical controls need more than a tick.

Verify them with the worker, at the point of work.



FLHA BEFORE THE TASK. INSPECTION DURING THE SHIFT.

In an FLHA before the task, or during a scheduled inspection, Tandm asks the questions a ticked box cannot. It asks about the hazard, checks the required controls with the worker and captures any remaining exposure, then confirms the completed account before it becomes the record.

FRENCH ↔ ENGLISH → VERIFIED RECORD

One conversation. Two languages. One verified record.
